## SUMMARY REPORT OF THE EVENT

### ADC-2104: MANAGEMENT OF ROOT CANAL ANOMALIES

An understanding of the developmental anomalies of teeth, roots and root canals is essential for successful root canal treatment. In addition to various types of root canal configuration and accessory canal morphology, a wide range of developmental tooth, root and canal anomalies exists, including C-shaped canals, dens invaginatus, taurodontism, root fusion, dilacerations and palato-gingival grooves. There is a direct association between developmental anomalies and pulp and peri-radicular diseases that usually require a multidisciplinary treatment approach to achieve a successful outcome. Hence, a thorough knowledge is required for successful management of these types of root canal anomalies. Dr.Chakradhar Raju having 29 years experience in academics, post graduated guide since 24 years. He is having no.of publications both in national & international pubmed journals. He is also keynote speaker of different platforms. He is DCI panel member for periodic & specialty inspections .The programmed aimed at student developing unconventional insights towards root canal anomalies treatment and should enhance the clinical skill for the above situations.
