SUMMARY REPORT

ADC-2201: FULL MOUTH REHABILITATION

Full mouth rehabilitation of severely worn dentition is a complex procedure. Assessment of the vertical dimension is an important aspect in these cases. It should be conservative and should not be changed without careful consideration. It is necessary to recognize that form follows function and that anterior teeth play a vital role in the maintenance of oral health. Confirmation of tolerance to changes in the vertical dimension of occlusion (VDO) is of paramount importance. Articulated study casts and a diagnostic wax-up can provide important information for the evaluation of treatment options. Alteration of the VDO should in harmony with stomatognathic system. Full mouth rehabilitation should restore the vertical and centric relation of the patient. Student is expected to learn about the treatment protocols involved in managing complex cases like full mouth rehabilitation.
