SUMMARY REPORT OF THE EVENT

ADC-2205: MAGNIFICENT MICROSCOPES IN RESTO AND ENDO

Magnification devices improve direct and indirect vision. It has been more than 30 years since dental practitioners raised the issue of using dental operating microscopes (DOM) in restorative dentistry, identifying the benefits of magnification in diagnosis and treatment steps. The growth is evident in recent years, maybe because of the familiarity of dentists with dental microscopes which have already become implicit endowment for endodontic specialists. Fiber optic lighting is the key factor that complements the magnification offered by the microscope so that treatments can now be performed under increased safety conditions and in conditions of significantly higher quality than in the past. Since the beginning of the 2000s the principles of minimally invasive dentistry have been widely promoted in dentistry. These principles are major impetus for the use of microscope by dentists. Working with magnification leads dentists to be more conservative with dental tissues. Resource Person: Dr. Geetha, Professor, SDM Dental College, Dharwad. The programme aims at teaching student the working mechanism of dental microscopes and its applications in various clinical situations.
